

December 4, 2013

His Excellency Li Keqiang  
Premier  
People's Republic of China

Dear Premier Li:

Our associations represent tens of thousands of companies from around the world that assign great importance to our trade and investment relations with China. We are writing to urge your government to actively help steer the negotiations to expand product coverage of the Information Technology Agreement (ITA) to a successful conclusion as soon as possible.

As a leading manufacturer and exporter of technology products, China stands to be one of the largest beneficiaries of an expanded ITA. Trade data demonstrate the current ITA has helped generate significant benefits for China. According to the World Trade Organization (WTO), China's share of global exports of information technology products has grown from 2.2 percent in 1996 to 27.5 percent in 2010. An expanded ITA would similarly contribute to the Chinese economy and help strengthen your country's innovation capacity.

As you may know, the ITA expansion talks broke down in Geneva on November 21, despite tremendous progress over the past year by nearly all parties in the negotiation to achieve an ambitious outcome. In fact, virtually every negotiating member made significant and constructive compromises to achieve this goal at what was hoped to be the final round of talks last month.

Even though China took positive steps in October that helped bring an end to a three-month suspension in negotiations, it arrived in Geneva for the November talks with what appeared to be a narrow mandate, allowing only limited improvements to its list of import-sensitive products. That list continues to be more than twice as large as any other members' "sensitivities" list. Despite significant demonstrations of flexibility by others, China seemed unable to seek constructive compromises. The talks subsequently unraveled, making it impossible to reach an outcome by the targeted deadline of the WTO Ministerial in Bali this week. This came as a huge disappointment to all of us.

This was a confusing signal from China, coming shortly after the impressive reform objectives spelled out in the Third Plenum leadership communiqué, including a call for China to more deeply integrate itself into the global economy.

Global industry regards the ITA as one of the most commercially successful WTO trade pacts, contributing enormously to promoting jobs, increasing competitiveness, lowering consumer prices, boosting economic growth, and fostering innovation around the world. Please see attached a global industry statement supporting ITA expansion that includes 81 associations from 31 economies and regions around the world.

Broadly speaking, a successful ITA expansion would increase the relevance of the WTO as a champion of trade liberalization. Indeed, a successful ITA expansion deal would represent the first market-access agreement in the WTO in nearly two decades. More specifically, it would also send a strong signal to the world that China is ready and willing to be a constructive participant in other international trade talks.

Mr. Premier, we respectfully urge China to view this moment as an historic opportunity to foster global commerce in information and communications technology goods, spur worldwide growth, and give a much-needed boost to the WTO. We therefore ask your government to promptly return to the negotiating table with a more forward-leaning, ambitious approach that can act as a catalyst for bringing this important initiative to a strong and swift conclusion.

ITA expansion will spur economic growth, create jobs, and drive innovation the world over. These are objectives we all share. We look forward to continuing to work with your government to ensure a successful, mutually beneficial ITA expansion outcome.

Sincerely,

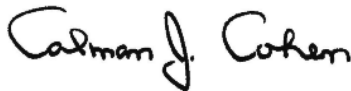

Hendrik Abma

The Honorable Miao Wei, Minister, Ministry of Industry and Information Technology  
The Honorable Xu Shaoshi, Minister, National Development and Reform Commission  
The Honorable Cui Tiankai, Ambassador of the People's Republic of China to the United States

July 2013

## Global Industry Calls for Swift and Ambitious Expansion of the Information Technology Agreement

Industry associations from around the world strongly support the ambitious tariff-elimination initiative to significantly expand product coverage of the Information Technology Agreement (ITA), which is one of the most commercially successful trade agreements in the World Trade Organization (WTO).

The ITA has helped to drive innovation, accelerate productivity, increase employment, lower consumer prices, and bridge communities across the globe in ways unimagined 16 years ago when the ITA was established. Product expansion of the ITA, as well as expansion of geographic scope of the agreement would yield immediate and substantial benefits, removing tariffs on a vast array of tech products not currently covered.

We welcome the momentum negotiators in Geneva have achieved in their monthly meetings to develop a strong list of products to be considered for ITA coverage. And we applaud APEC trade ministers for recently reaffirming APEC's support for an expanded agreement, calling for the outcome of negotiations to be "commercially significant" and completed by "the middle of the year."

Consumer Electronics Retailers Coalition

A window has opened to conclude the talks by late summer of this year. Given that not a single product line has been added to the ITA since it was born 16 years ago, we must seize the moment to achieve this trade win for our economies and the global economy, and bring greater relevance to the work of the WTO. We may not get another opportunity to significantly expand the ITA for many years.

We therefore call on ITA members to build on the current momentum, aim high for an ambitious, commercially significant outcome, and complete their negotiations to expand this critically important agreement by mid-2013.

We continue to be deeply committed to working closely with our governments to achieve a swift and ambitious outcome that will expand trade, stimulate growth, increase jobs, spur innovation, and promote prosperity around the world.
