

JEITA CP-2319 Audio Pon-Playlist Format for Broadcast Use

This is the standard for creating playlist (PON-playlist) of equipment to play a sound effect immediately. Feature called "PON" is used in professional broadcasting stations.

By creating a PON-Playlist in accordance with this standard, you can keep the compatible PON operation between different equipments, and will be convenient.

Both inside and outside the broadcasting station, this standard will be applied to the PON-Playlist and audio files used in the PON operation for broadcast purposes.

In addition, this standard will also be applied to the case of change "the Pon-Playlist and audio files" between different systems and equipments.
